ant   *Ant: Get antonyms for one word*

Description

Ant: Get antonyms for one word

Usage

```
ant(word, n_words = -1)
```

Arguments

word	character, one word you want to find antonyms for.
n_words	integer, the number of words to return.

Value

antonyms of the word you entered. Returns character(0) if word not found

Examples

```
ant("good")
ant("evil", 25)
# No words for spelling mistakes
ant("spolling misteak")
```

---

ants   *Ants: Get antonyms for many words*

Description

Ants: Get antonyms for many words

Usage

```
ants(words, n_words = -1)
```

Arguments

words	word, character - many words you want to find antonyms.
n_words	integer, the number of words to look for.

Value

named list of antonyms. Returns character(0) if word not found

Examples

```
ants(c("good", "evil"), 10)
```

---

n_words	*Return the number of words in a string*

Description

Return the number of words in a string

Usage

```
n_words(x)
```

Arguments

x   a string

Value

vector of numbers

Examples

```
syn_end <- syn("end")
syn_end_words <- n_words(syn_end)
syn_end[syn_end_words <= 1]
```

---

syn	*syn*

Description

syn provides a dependency free way to get synonyms and antonyms of words.

Usage

```
syn(word, n_words = -1)
```

Arguments

word   character, one word you want to find synonyms for.

n_words   integer, the number of words to look for. An integer Default is all words

Value

synonyms of the word you entered. Returns `character(0)` if word not found.
